

For 8th grade mathematics, students will be using Discovery Ed probes. Assignments will be posted on 8th Grade NTI Google Classroom. In addition, communication will be done through Remind. The assignments will be rigorous since they are aligned to the standards. However, if students are currently working on a project based learning activity, they will work on them in place of the probes. The parents will verify by signing a form stating the amount of time their child spent on their project.

Students who are unable to access the internet, will be given a paper packet at home.

For 8th grade Language Arts, students will use Read Works passages and questions. Assignments will be posted on the 8th grade NTI Google Classroom. Teachers will communicate with parents and students via Remind. These assignments will meet the rigor requirement because the assignments allow for a variety of assessment questions to analyze student understanding.

Students who cannot access the internet will have a paper copy at home.

If we are currently working on a project in class, students will work on that project at home instead of Read Works assignment. Parents will sign off, stating how long the student worked on the project.
